and Intermediate 2 papers

Unit 3: Chemistry in Society

March 2014

N5 Chemistry Past Paper Questions

This resource has been produced in response to the requests from practitioners who attended the National Qualifications Sciences events at Hampden Stadium in December 2013 which Education Scotland organised in partnership with the SQA.

The questions in this resource relate to the Chemistry in Society Unit for National 5 Chemistry and have been taken from the 2011, 2012 and 2013 Standard Grade and Intermediate 2 Past Papers.

For Chemistry in Society (Unit 3), the mandatory course key areas are as follows:

- Metals
- Properties of plastics
- Fertilisers
- Nuclear Chemistry
- Chemical Analysis

In cases where the questions relate to more than one of the National 5 Units, the constituent parts of the question have been separated into their respective key areas. The stem of the question has been retained to give the context of the question. If practitioners require the full integrated question, they should refer to the original past paper on the [SQA website](#).

Past paper questions for the other two National 5 Units, Chemical Changes and Structure and Nature's Chemistry are also available from Education Scotland's National Qualifications Glow portal: <http://www.educationscotland.gov.uk/nqcoursematerials/> (cut and paste link into your browser).

Education Scotland would like to acknowledge the support of the SQA in helping us produce this resource. We hope it proves helpful to practitioners across Scotland and assists with the implementation of the national qualifications.
